Ebay

Retail and common products

eBay product feed API for buying experience in new application

Open and free, works with many languages, but need approval and have to do product application for some specific APIs offered

Sell, Buy, Search, Affiliate, Customer Service, Marketing available

eBay RESTful APIs have authentication, access tokens, error handling, and more

Starting

Create developer's account on eBay portal: https://developer.ebay.com/join/

API keys generated on developer account

Get access token and create keyset on the application keys page

Every set of application keys has a different scope of methods, resources, and functionality.

Make a call with API Explorer using a token created by correct flow (ex. Client credential)

Try Out APIs

Select method from API Explorer.

Select environment, site ID, which API, and which calls to try.

All calls must be authorized, access tokens depend on the type of call.

Configure request by reviewing endpoint, query parameters, and variable values.

Check the token, URL, request payload, and HTTP headers.

Execute
